

How can you make a model of the material found in the Earth?

1. Put 5 spoonfuls of corn starch in a cup. Add 3 spoonfuls of water. Stir. Describe the mixture in the cup.
2. Pour the mixture into your hand.

**Material in the Earth**

How can you make a model of the material found in the Earth?

3. Close your hand and squeeze.

Describe the mixture when it was squeezed in your hand.

- Infer what caused the mixture to change.
- Draw a conclusion about the mixture acting like both a solid and a liquid.
